

① curveCurveIntersections: 曲线 × 曲线

② curveLineIntersections: 曲线 × 直线

③ 返回值: (pt, t1, t2) 元组

```
curveCurveIntersections(curve1, curve2)
((86.44, 109.09), t1=0.5678, t2=0.2221)
((126.42, 143.37), t1=0.7646, t2=0.5267)
((180.86, 169.13), t1=0.9196, t2=0.9125)
```

```
curveLineIntersections(curve1, line)
((125.26, 142.62), t1=0.7603, t2=0.4891)
```

pt: 交点坐标

t1: 交点在 curve1 上的参数值

t2: 交点在 curve2 / line 上的参数值

配合 cubicPointAtT(*curve, t) 可由参数值
反查曲线上对应点的坐标

— curve1 — curve2 — line X 曲线×曲线交点 O 曲线×直线交点 --- 控制多边形

交点标注: 坐标与参数值 (t1, t2)
